Receiving sensitivity: - 94 dBm Operating environment: - 20 - 70 ℃
Operating voltage: 2.7-3.2V Standby current: less than 3uA.

FCC Warning:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment.
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.
The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.

4.Help

- (1)Why can't the anti-lost device connect to smart devices (Mobile phones,tablets, etc)?
A. Confirm if the smart device is turning on Bluetooth.
B. Determine if the battery has power? If it is a button battery, pull out the battery, then load it, and connect the anti-lost device to the APP again.
C. Restart the smart device or restart the app.
- (2)Why does the device alarm frequently?
Due to the differences in the materials of the products themselves, individual anti-lost devices may have frequent alarms. The following steps can be set to further improve the user experience.
A. Disconnect, no mobile phone alarm, "Alarm when Bluetooth Disconnected" in the "Setting" option in Device (default in closed), this option does not affect the function of the antilost device to find the phone.
B. In the "Settings", there is "WiFi Do Not Disturb" option to turn on (default in closed), the mobile phone is disconnected from the anti-lost device in this area, and the mobile phone will not sound an alarm.
C. There is a "Silent Period" option in "Settings" (Default in opened), the default time period is 23: 00 - 07 : 00, and the time period can be changed according to the user's habits.
- (3)The Working distance of the device?
The anti-lost device is a personal communication consumer product, it belongs to the Class 2 standard, and the general distance is 12 - 30 meters (without any barriers)
- (4)Why is the device alarming frequently at home ?
Due to the poor penetration of the Bluetooth standard to the spacers, if there are more load-bearing walls in the actual living room, the anti-lost device will be frequently alarmed. It is recommended that the user can refer to the help point 2 to optimize the experience. If you are sensitive to this requirement, it is recommended to consider it. Please be cautious to purchase such products.
- (5)How to distinguish the positive and negative of the button battery?
(If the accessory is not a button battery, skip it)
See the diagram.
